DAO KHAI MINH

FULL-STACK SOFTWARE ENGINEER | JAVA · SPRING BOOT · ANGULAR

Ho Chi Minh City, Vietnam | Born 2003 | 0832 664 044 | khaiminh0401@gmail.com | github.com/khaiminh0401

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3+ years of experience developing and maintaining enterprise applications. Focused on Java/Spring Boot and Angular, with practical experience analyzing API throughput, investigating performance bottlenecks during traffic spikes, and improving frontend rendering and user experience. Works across distributed services, production troubleshooting, Kubernetes and LLM-enabled application workflows.

TECHNICAL SKILLS

Core Development Java, Spring Boot, Spring Security, Angular, TypeScript, REST APIs, PostgreSQL

Architecture & Performance Microservices, Angular SSR, API performance, caching, asynchronous messaging, RBAC

Infrastructure & Observability Docker, Kubernetes/RKE2, CI/CD, Kafka, Redis, Prometheus, Grafana, Loki

AI Engineering LLM integration, content generation, context-aware routing, RAG, LangChain4j, Vertex AI

AI-Assisted Workflow OpenAI Codex, agent harness orchestration, multi-agent task delegation, AI-assisted review

Additional C#/.NET Web API, PHP, SQL Server, MongoDB, Elasticsearch, NGINX, Traefik

PROFESSIONAL EXPERIENCE

VNPT Information Technology Center · Full-Stack Software Engineer | *Oct 2023 – Present*

- Analyzed API throughput and production traffic patterns to identify performance bottlenecks; optimized request handling and investigated service degradation during sudden traffic spikes.
- Worked on frontend architecture and rendering performance, including Angular SSR and client-side optimization, to improve responsiveness and overall user experience.
- Developed and integrated enterprise backend services and application workflows using Java/Spring Boot, Angular, .NET APIs, PostgreSQL and asynchronous messaging.
- Integrated LLM-backed capabilities for automated content generation and context-aware navigation within application workflows.
- Supported deployment, monitoring and incident troubleshooting for containerized services using Docker, Kubernetes/RKE2, Prometheus, Grafana and Loki.

Fujinet Systems · Backend Developer | *Feb 2023 – Oct 2023*

- Maintained backend functionality for a large-scale Japanese book retail platform using PHP and Java.
- Refactored and upgraded legacy application code for newer technology versions while addressing compatibility issues and preserving existing business behavior.

SELECTED PROJECT

FlowDesk | Personal engineering project

- Developing a Spring Boot/Angular modular-monolith workspace platform. Implemented API connectivity, PostgreSQL/Flyway schema groundwork and automated tests. Authentication and workspace RBAC are planned.

EDUCATION

2024 – Present University of Information Technology, VNU-HCM | Information Technology (continuing degree)

Graduated 2024 FPT Polytechnic College | Software Applications

LANGUAGE

English Basic conversational proficiency
